NILDE
Network Inter-Library Document Exchange

An example of cooperation among libraries

NILDE:

✓A WEB-BASED **SOFTWARE**

✓A **NETWORK** OF LIBRARIES who share their bibliographic resources

http://nilde.bo.cnr.it/

A SHORT HISTORY OF THE NILDE PROJECT

A SHORT HISTORY OF THE NILDE PROJECT

- 2001: first test project and prototype software designed and developed by CNR (National Research Council), CNR Bologna Research Area Library
- 2004: rules and regulations became effective
- 2005: integration with ACNP catalogue (Italian National Catalogue of Periodicals)
- 2006: Nilde becomes a national service managed by the CNR Bologna Research Area Library
- 2012: ALPE project (E-journals Licenses Database)

A SHORT HISTORY OF THE NILDE PROJECT

- 2012: integration with the GTBib-SOD software used by Spanish libraries for document delivery
- 2013: cooperation with ITALE (Italian Association of Ex-libris Users)
- 2016: NILDE Web Services: API and integration with other systems
- 2019: partnership with The Wikipedia Library

NILDE RULES AND REGULATIONS

Article 1.1 Commitments toward the other libraries

Each library commits itself, in addressing the other members:

- To supply DD services reciprocally;
- To participate in one of the national collective catalogues (ACNP, SBN or REBIUN for Spanish libraries).
- To fill document requests in as short a time as possible (average 2 working days / maximum 5 working days)
- To supply documents at no charge, unless there is a strong imbalance between the number of documents requested and supplied
- To distribute fairly its own requests to all the libraries

NILDE RULES AND REGULATIONS

ADVANTAGES OF HAVING COMMON RULES:

- The policy protects the interest of the entire community: by joining national catalogues, libraries commit themselves to supplying a quality service, rather than just using it
- The policy leads to balance the entire system
- The mechanisms of requests encourages self-regulation and avoids overloading of a small number of libraries

Article 1.2 Compliance with the Copyright Law

The libraries pledge themselves to comply with the Copyright Laws in force (Law no. 633 of the 22/4/1941 and successive amendments and supplements) and, where prevailing, to the existing contractual clauses.

Article 2 – Representing Bodies of NILDE

- The Administrator of NILDE: Consiglio Nazionale delle Ricerche, Biblioteca dell'Area di Ricerca di Bologna: it guarantees the service and provides technical support
- Assembly of NILDE Subscribers (ASN): it elects the Committee of Nilde Libraries, votes to modify rules and regulations, meets at least once every three years, normally within the Nilde biannual conference
- Committee of NILDE Libraries (CBN): it guarantees compliance with the rules and regulations, monitors the network and reports unfair behaviours, acts as a negotiator between the ASN and the Administrator

NILDE WORKING GROUPS

Open to all volunteers from ASN

- COMMUNICATION
- PROMOTION
- ALPE
- EDUCATION
- INTERNATIONALISATION
- NILDE NEW DEVELOPMENTS

NILDE'S PROCESSES

NILDE'S PROCESSES

- Linking with the standard protocol ANSI/NISO Z.39.88-2004 OpenURL Framework for Context-Sensitive Services
- Links to catalogues through Z39.50 protocol and MARC21 XML (integration with ACNP and SBN)
- Secure electronic DD (SEDD)/hard copy: Nilde SEDD is accepted by most publishers (final users receive a paper copy)
- ALPE licence archive (negotiated /standard)
- Real-time monitoring of interlibrary exchanges

IN PRACTICE:

THE USER:

- Finds a bibliographic reference in the discovery tool of the library.
- Clicks on the button «Request via NILDE»
- Authenticates in NILDE (SSO institutional authentication or with Nilde credentials)
- Send the request in one click (all fields of the request are already filled)

THE REQUESTING LIBRARY:

- Receives the request from the user
- If the user made the request via NILDE, the request is already in the «borrowing» tab (alternatively, the librarian can enter the request manually)
- NILDE automatically verifies holdings in the connected catalogues and shows potential supplying libraries
- The librarian chooses the supplying library with a single click and sends the request

Publication/Book title: AIDS research and human retroviruses

Article/Section title: Ranpirnase Reduces HIV-1 Infection and Associated Inflammatory Changes in a Human Colorectal Explant Model

Author: Brand RM

Other authors: Siegel A , Myerski A , Metter EJ , Engstrom J , Brand RE , Squiquera L , Hodge T , Sulley J , Cranston RD , McGowan I

Year: 2018 **Volume:** 34 **Issue:** 10 **Initial page:** 838 **Final page:** 848

Abstract:
Ranpirnase (RNP) is a low molecular weight type III endoribonuclease, which demonstrates broad antiviral and antitumor properties. We sought to characterize the antiviral activity of RNP against HIV-1 and to determine whether RNP modulates local inflammatory changes associated with HIV infection in the colorectal explant model. Colorectal explants were incubated for 2 h with HIV-1BaL, in the presence of increasing concentrations of RNP (0-60 mug/mL). After washing, explants were cultured for 14 days, with supernatant collected at days 3, 7, 10, and 14. All samples were assayed for HIV-1 p24. Additionally, 30 soluble inflammatory biomarkers were assayed in the day 3 supernatant sample. Other biopsies were stimulated with lipopolysaccharides (LPS) (10 mug/mL) in the presence of RNP and soluble biomarkers assayed at day 3. RNP inhibited productive infection of the colorectal explants with HIV-1BaL and induced a dose-dependent decrease in 15/30 biomarkers. Affected biomarkers included IP-10, MDC, MIP-1alpha, MIP-1beta, TARC, IL12-p40, IL-15, IL-17, IL-1alpha, IL-7, IFNgamma, IL12-p70, IL-1beta, IL-4, IL-5, and TNF-beta. Similarly, RNP dose-dependent inhibition was demonstrated in 7/30 biomarkers after LPS stimulation, all of which overlapped with HIV-1BaL-induced biomarker changes. The ability of RNP to inhibit both colorectal explant HIV-1BaL infection and inflammatory changes associated with HIV-1 infection makes RPN a promising agent for topical rectal pre-exposure prophylaxis.

THE SUPPLYING LIBRARY:

- Receives the request in its dashboard (tab: «lending»)
- If there is an integration with a link resolver, the librarian can check if the document is available and, in case of electronic resource, download it immediately
- Before sending an electronic document, the librarian checks the licence using the «find licences» botton and applies them
- Fulfills the request by choosing a trasmission method: NILDE SEDD, mail, fax, other) or: unfulfills the request explaining the reasons for unfulfillment

Licenses
To proceed with this lending request, click on the FIND LICENSES button. The system will search for all appropriate licenses available for this document and show them to you.
Given an ISSN and year requested (or an ISBN), the ALPE database is searched.
You can select the appropriate license for your institution. Then, after clicking on the APPLY button, you will be able to complete your request under the terms and conditions allowed by the publisher.
If you are not able to select any license or there is no license within those available appropriate for your library, click on DO NOT APPLY and proceed by selecting manually the consignment methods.
Please remember that electronic licenses apply to electronic materials and thus for a lending request from a paper journal or book, click on the FIND LICENSES button and then on NOT SUBJECT TO LICENSES.

??ALPE è l'Archivio Licenze dei Periodici Elettronici di NILDE a supporto del bibliotecario che svolge il servizio di Document Delivery.
Consente di individuare la licenza appropriata e facilita l'interpretazione delle clausole relative al Document Delivery.
Contiene le licenze che sono state negoziate con gli editori, come usualmente avviene nei contratti consortili, e le licenze standard, non negoziate, rese pubbliche sui siti web degli editori.
Contatti: alpe-support@area.bo.cnr.it
Vai alla pagina di ALPE
??L'archivio delle licenze ALPE contiene esclusivamente le clausole riguardanti gli usi consentiti dalle licenze in merito alle attività di DD/ILL, sia per le licenze negoziate con gli editori/aggregatori sia per le licenze standard rese pubbliche sulle pagine web dagli stessi. La Biblioteca d'Area del CNR di Bologna che coordina il progetto ALPE e le singole Istituzioni che hanno compilato le informazioni relative agli usi consentiti per ogni singola licenza, non sono responsabili di un utilizzo improprio da parte degli operatori di biblioteca nelle attività ordinarie di DD/ILL. E' primaria responsabilità dell'operatore di biblioteca operare nel rispetto degli usi consentiti indicati dalla licenza dell'editore/aggregatore

THE PANDEMIC AND THE IFLA - RSCVD PROJECT

THE PANDEMIC AND THE IFLA - RSCVD PROJECT

Critical issues in the provision of interlibrary services during the pandemic led to the formation of volunteers form different parts of the world within the project IFLA RSCVD (resource Sharing in Times of COVID-19) which have allowed access to many resources otherwise unavailable.

Many libraries in the NILDE community have been actively involved in the project both as requesting libraries and as voluntary suppliers.

NILDE CBN has also launched an appeal for the right of access to scientific knowledge in a state of emergency, addressed to pubisher's associations and the Ministries of Education, Health and Cultural Heritage

UPCOMING DEVELOPMENTS

NILDE 6

- Available on mobile and with a user-friendly interface
- Greater integration with ILS (Information Library Systems) and DD/ILL management systems
- More available functions for operators and users

Thank
you!
